

## Wai‘ūlili, Hawai‘i

### WATERSHED FEATURES

Wai‘ūlili watershed occurs on the island of Hawai‘i. The Hawaiian meaning of the name is unknown. The area of the watershed is 16.8 square mi (43.6 square km), with maximum elevation of 6086 ft (1855 m). The watershed's DAR cluster code is not yet determined. The percent of the watershed in the different land use districts is as follows: 98.8% agricultural, 0.7% conservation, 0% rural, and 0.5% urban.

**Land Stewardship: Percentage of the land in the watershed managed or controlled by the corresponding agency or entity. Note that this is not necessarily ownership.**

## HISTORIC RANKINGS

**Historic Rankings: These are rankings of streams from historical studies. "Yes" means the stream was considered worthy of protection by that method. Some methods include non-biotic data in their determination. See Atlas Key for details.**

Multi-Attribute Prioritization of Streams - Potential Heritage Streams (1998): No

Hawaii Stream Assessment Rank (1990): not ranked

U.S. Fish and Wildlife Service High Quality Stream (1988): No

The Nature Conservancy- Priority Aquatic Sites (1985): No

National Park Service - Nationwide Rivers Inventory (1982): No

**Current DAR Decision Rule Status: The following criteria are used by DAR to consider the biotic importance of streams. "Yes" means that watershed has that quality.**

Native Insect Diversity <u>&gt; 19 spp.</u>	Native Macrofauna <u>Diversity &gt; 5 spp.</u>	Absence of Priority 1 <u>Introduced</u>
No	No	Yes
Abundance of Any <u>Native Species</u>	Presence of Candidate <u>Endangered Species</u>	Endangered Newcomb's <u>Snail Habitat</u>
No	No	No

### CURRENT WATERSHED AND STREAM RATINGS

The current watershed and stream ratings are based on the data contained in the DAR Aquatic Surveys Database. The ratings provide the score for the individual watershed or stream, the distribution of ratings for that island, and the distribution of ratings statewide. This allows a better understanding of the meaning of a particular ranking and how it compares to other streams. The ratings are standardized to range from 0 to 10 (0 is lowest and 10 is highest rating) for each variable and the totals are also standardized so that the rating is not the average of each component rating. These ratings are subject to change as more data are entered into the DAR Aquatic Surveys Database and can be automatically recalculated as the data improve. In addition to the ratings, we have also provided an estimate of the confidence level of the ratings. This is called rating strength. The higher the rating strength the more likely the data and rankings represent the actual condition of the watershed, stream, and aquatic biota.

#### WATERSHED RATING: Wai‘ūlili, Hawai‘i

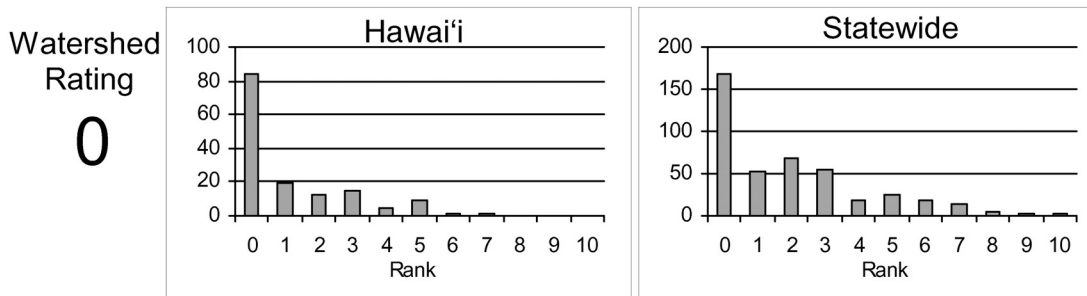

Land Cover Rating: Rating is based on a scoring system where in general forested lands score positively and developed lands score negatively.

Shallow Waters Rating: Rating is based on a combination of the extent of estuarine and shallow marine areas associated with the watershed and stream.

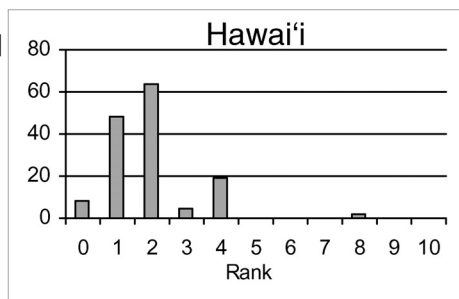

Stewardship Rating: Rating is based on a scoring system where higher levels of land and biodiversity protection within the watershed score positively.

**WATERSHED RATING (Cont): Wai‘ūlili, Hawai‘i**

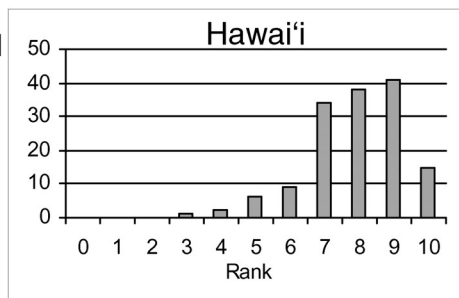

**Size Rating:** Rating is based on the watershed area and total stream length. Larger watersheds and streams score more positively.

Watershed  
Rating  
**2**

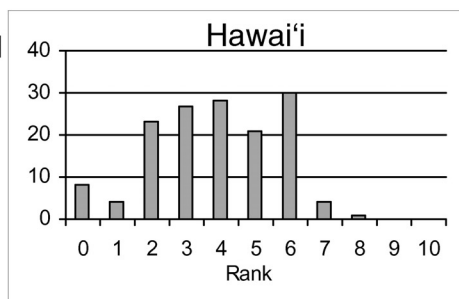

**Wetness Rating:** Rating is based on the average annual rainfall within the watershed. Higher rainfall totals score more positively.

Watershed  
Rating  
**2**

**Reach Diversity Rating:** Rating is based on the types and amounts of different stream reaches available in the watershed. More area in different reach types score more positively.

Watershed  
Rating  
**4**

**Total Watershed Rating:** Rating is based on combination of Land Cover Rating, Shallow Waters Rating, Stewardship Rating, Size Rating, Wetness Rating, and Reach Diversity Rating.

Watershed  
Rating  
**3**

**BIOLOGICAL RATING: Wai‘ūlili, Hawai‘i**

Native Species Rating: Rating is based on the number of native species observed in the watershed.

Stream  
Rating  
**NR**

Introduced Genera Rating: Rating is based on the number of introduced genera observed in the watershed.

Stream  
Rating  
**NR**

All Species' Score Rating: Rating is based on the Hawaii Stream Assessment scoring system where native species score positively and introduced species score negatively.

Stream  
Rating  
**4**

Total Biological Rating: Rating is the combination of the Native Species Rating, Introduced Genera Rating, and the All Species' Score Rating.

Stream  
Rating  
**3**

**OVERALL RATING: Wai‘ūlili, Hawai‘i**

Overall Rating: Rating is a combination of the Total Watershed Rating and the Total Biological Rating.

Watershed  
Rating
